WINTER SEED BARLEY

CUT FEED COSTS BY SOWING

A FIELD OF BARLEY THIS FALL

TWO TOP NOTCH VARIETIES

TO CHOOSE FROM ➡➡

CERTIFIED WONG BARLEY (Treated)

The most popular variety of winter barley. Beardless stiff straw—good variety for combining. Keep feed costs down by producing more of your own feed. Barley can be substituted for part corn in your feeding program. Sow 2 bushels per acre.

CERTIFIED HUDSON BARLEY (Treated) (Bearded)

This is one of the most promising varieties of winter barley. This variety originated in New York state. Hudson is superior in winter hardiness, disease resistance, and yield. It has stiffness of straw which gives it good standability. The grain carries a very high weight test. Sow 2 bushels per acre.

WINTER SEED WHEAT

NEW CERTIFIED REDCOAT WHEAT

A new superior beardless wheat for Pennsylvania farmers. Redcoat is outstanding for its high yield and good resistance to various diseases. Redcoat is the first wheat for Pennsylvania with combined resistance to Hessian fly, leaf and stem rust, mildew, and has good resistance to loose smut. It also has the stiffest straw of any of the recommended varieties for Pennsylvania, with less straw breakage than Pennoll, Dual, and Seneca. Sow 1 to 1½ bus. per acre. Order early as supply is limited. See Price List.

CERTIFIED SENECA WHEAT (Treated)

Seneca is an excellent variety of outstanding performance. It is a medium tall, beardless, stiff straw, excellent standability, shows good resistance to disease. Tests show a substantial increase in yield over Thorne. It carries a higher test weight per bushel than most varieties and has Excellent milling quality. It matures one to three days later than Thorne, and is fast replacing that variety. You will not want to over-look this outstanding variety. Sow 1½ bushels per acre, two bushels on sandy soils.

CERTIFIED DUAL WHEAT (Treated)

This variety is outstanding for its resistance to Hessian fly. For this reason can be sowed early, and pastured this fall and still come through with an excellent yield of good quality grain. In many cases Dual has outyielded other standard varieties of wheat here in Pennsylvania. This is a beardless variety with fairly stiff straw of medium length. Sow 1½ bushels per acre; 2 bushels per acre on sandy soils.

CERTIFIED PENNOLL WHEAT (Treated)

One of the newer varieties. Tall with very stiff straw, beardless. Produces high yields of both grain and straw. Considered one of the highest yielders in Pennsylvania. Sow 1½ bushels per acre; 2 bushels per acre on sandy soils.

WINTER SEED OATS

WINTER OATS

Less winter-hardy than barley or wheat. Sow about mid-September. Matures between barley and wheat. Sow on well drained soil in southeastern Pennsylvania, Maryland, Delaware, and south Jersey.

CERTIFIED NORLINE WINTER OATS (NEW)

The most winter-hardy winter oats recommended for Pennsylvania. Excellent high-yielder, heavy bushel weight, light yellow grain with occasional brown tinge, fairly stiff, medium length straw. Sow 2½ bus. per acre. See Price List.

CERTIFIED DU BOIS WINTER OATS (Treated)

This is one of the newer varieties. Stiff straw, medium height. Excellent yielder of good quality grain. One of the most winter hardy varieties of winter oats. Shows good resistance to disease. Highly recommended for southeastern Pennsylvania, Maryland, Delaware, and New Jersey. Sow 2½ bushels per acre.

WINTER SEED RYE

BALBO RYE (Pasture Type)

This variety is recommended mainly for pasture. Produces earlier spring pasture than other varieties. Sow 2 bushels per acre.

TETRA PETKUS RYE

A superior type rye that produces a very high yield of large plump kernels. In many cases the yield of Tetra Petkus is nearly twice that of ordinary rye. Produces excellent pasture and can also be used for silage. Sow 2 bushels per acre.

ALFALFA — RED CLOVER — LADINO CLOVER

CERTIFIED DU PUIITS ALFALFA

(Doo Pwee)

In looks and performance Du Puits is one of the most outstanding alfalfas of the day. It has large almost round leaves, grows big and tall, blooms about a week earlier in the spring and grows later in the fall. It is noted for its:

- High yield
- Exceptional seedling vigor
- Quicker recovery after grazing or cutting.
- Longer growing period.
- Winter Hardiness.
- Greater leaf spot resistance.

We highly recommend this variety where stands are wanted for not more than three crop years as this is not a wilt resistant variety.

When seeded alone sow 15 to 20 pounds per acre. Can also sow 4 pounds S-37 Orchard grass or 8 pounds Brome Grass with 12 to 15 pounds alfalfa. See Price-List.

CERTIFIED BUFFALO

Buffalo is similar to Ranger in wilt resistance and in yielding ability. It is recommended for Southeastern Pennsylvania, and Maryland while Ranger is recommended for Northern areas. Sow 15 to 20 pounds per acre.

CERTIFIED RANGER ALFALFA

Ranger is a good yielding wilt resistant variety. It has earned quite a good reputation over the last ten years, but is now becoming out-dated by some of the newer higher yielding varieties. It is still a good value because of its lower price. Sow 15 to 20 pounds per acre.

CERTIFIED VERNAL ALFALFA

Vernal is noted for its:
Wilt Resistance
High Yield
Winter Hardiness
Its ability to stay green and not yellow under adverse weather conditions.
Excellent quality—fineness of stem.
Recommended where stands are wanted to last from one to more than three years. Sow 15 to 20 pounds per acre. See Price-List.

CERTIFIED PENNSCOTT RED CLOVER

This is one of the newest varieties of Red Clover on the market. It originated in Pennsylvania and is one of the highest producers. It is outstanding in seedling vigor and early spring growth. Consistently superior stands the year following seeding. Sow 10 to 12 pounds per acre. See Price-List.

INOCULATE THIS SEED WITH LEGUME-AID

SPECIAL HAY MIXTURE

This is a good economical mixture that can be used for hay or pasture. It contains approximately 45% Red Clover, 25% Alfalfa, 25% Timothy and 5% Ladino Clover. Sow 12 to 15 pounds per acre. A very good buy. See Price-List.

CERTIFIED LADINO CLOVER

This is the most nutritious, palatable, and productive year-round pasture legume. It produces much of its growth early in the spring. Since Ladino is so highly nutritious, it is recommended that a companion grass be sown with it such as orchard or brome. This will give more bulk and help reduce the tendency of cattle to bloat. Ladino is highly palatable, very high in calcium, phosphorus, and carotene (Vitamin A), unequalled in grazing capacity. For pasture, sow 1 to 2 pounds Ladino per acre with other grasses.

SANDY OR HAIRY VETCH

Also known as Winter Vetch. A rapid-growing winter annual that thrives on little moisture and can be sown spring or fall. Stays green all winter, furnishing an abundance of pasture until early spring to late in fall. As a fertilizer it has few equals, as it grows on poor soils exceedingly well. Sow about 30 pounds of Vetch and about 1 bushel of rye or barley per acre. The grain sown with Vetch will act as a support for the vines. Vetch should be inoculated with Legume-Aid for best results. See Price-List.

GRASSES AND PERMANENT PASTURE MIXTURES

BROME GRASS

As a pasture or hay, Smooth Brome Grass scarcely has an equal in the area of its best adaptation. Growth begins early in the spring and continues through the summer if enough moisture is available. Its good volume of leafy forage is relished by all classes of livestock.

Brome Grass fits well into a grass-legume seeding. When seeded with alfalfa, sow 8 pounds Brome Grass with 10 to 15 pounds alfalfa. Two varieties are available.

SARATOGA (Southern Type) is a new variety developed by Cornell University. Recommended for use throughout the Northeast. Saratoga is extremely vigorous and more resistant to leaf diseases, thereby more leafy and succulent than Lincoln or Common. Because of its vigor and succulence it is much more valuable in our forage program as a combination with our improved legumes. Order early, as supply is limited. See Price-List.

LINCOLN is a variety of the Southern type that is leafy, productive and well adapted. It is second choice to Saratoga in our forage program. See Price-List.

ORCHARD GRASS

This makes a desirable grass on account of its quick growth and valuable aftermath. It starts growing earlier in the spring and stands dry weather better than any other grass. We recommend it mostly for pasture. May be sown either spring or fall on any kind of soil. Sow 15 to 20 pounds per acre. See Price-List.

S-37 ORCHARD GRASS

The S-37, by being two weeks later in maturity, does not start off so fast in the spring nor does it attain such rank growth early. It does come along later when other grasses are starting to go down hill and at that time is right at the peak of its tonnage output.

This is the best recommended variety to sow with alfalfa because it does not get too old by the time the first cutting is made.

Also it has been found that ladino clover seems to establish itself better with S-37, because it does not get much competition early.

When sown alone, sow 15 pounds per acre. When used with alfalfa or clover, sow 4 to 6 pounds of S-37 per acre. See Price-List.

REEDS CANARY GRASS

Reeds Canary Grass is being used more and more for waterways and wet pastures. It makes its best growth in fertile and moist or wet soils. Also makes excellent growth on upland soils that are frequently dry for long periods in summer. It is winter-hardy and grows most rapidly during the cool spring months.

Long life, long grazing season and large yields of nutritious, palatable forage make it a valuable pasture plant. Sow 12 to 15 pounds per acre for pasture. See Price-List.

TIMOTHY

Timothy seed sown with clover and alsike makes very good hay. It is also valuable in pasture mixtures. Timothy seed is low in price compared with clovers, therefore extreme care should be taken to sow best seed obtainable; highest in purity and germination. Sow 6 lbs. per acre. See Price-List.

CERTIFIED CLIMAX TIMOTHY

This variety represents the most advanced step in the improvement of Timothy to date, and is much superior to Common. Climax is a tall-growing, upright and relatively fine-stemmed variety. The leaves are abundant and are carried high on the stem.

The great advantage of Climax is in its increased palatability. Because of its later maturity and increased leafiness, it produces an exceptionally succulent hay relished by dairy cows. It is about a week later than Common, and is therefore a much more desirable companion grass in our legume-grass seedings. Sow 6 pounds per acre with legumes. See Price-List.

RYE GRASS (Annual)

One of the best grasses for a cover-crop. Among the most important characteristics of Rye Grass is its deep rooting system. Roots well distributed through the soil are a much more desirable form of organic matter than top growth. A good Rye Grass cover-crop turns over in a mass like a real sod when plowed. Can be sown in corn immediately after last cultivation for a cover-crop. Sow 15 to 20 pounds per acre.

PERENNIAL RYE GRASS

This Rye Grass is often used where a quick growth is desired. It is a deep-rooted grass and is generally used in pasture mixtures. When seeded alone use 20 pounds to the acre. See Price-List.

ANNUAL FIELD BROME GRASS

This is not to be confused with Lincoln Brome Grass. Field Brome is used mainly as a cover-crop in cornfields. It starts easily and forms a dense sod. It has a larger, fibrous root system for soil improvement and is very winter-hardy. It can be used for supplementary pasture. Sow 15 pounds per acre. See Price-List.

KENTUCKY BLUE GRASS

Kentucky Blue Grass may be sown spring or fall. One of the best grasses for pasture mixtures, it has many advantages for general purposes and is extremely hardy and stands severest droughts. Comes on early in spring and grows late in fall. Requires a good soil containing some lime to yield profitable crops. When sown alone, sow 20 to 30 pounds per acre. See Price-List.

(A Field of Du Puits Alfalfa)

PERMANENT PASTURE MIXTURE

Good pasture is the foundation of the riches of a farm. One of the most valuable crops for successful stock and dairy farming is abundant pasture. Our Mixture yields a very heavy crop of the finest and most succulent grasses early in the season until late in the fall, and is intended especially for seeding pasture-grounds. Several varieties are used in this Mixture, a combination of grasses of different habits and seasons of growth. They can be depended on to produce a turf that will stand the trampling of stock, and as the different grasses have different habits of growth, they grow closer together, their roots interlacing, covering the soil and forming a protection from the extreme heat, cold and dry weather.

TWO MIXTURES ARE AVAILABLE

HIGHLAND PASTURE MIXTURE is suitable to well-drained upland. It contains Timothy, Meadow Fescue, Kentucky 31 Fescue, Perennial Rye Grass, Red Clover, Red-Top, Kentucky Blue Grass and Ladino Clover. Sow 20 pounds per acre. See Price-List.

LOWLAND PASTURE MIXTURE is somewhat similar to the above mixture, but it contains more of the grasses suitable to wet lands. Sow 20 pounds per acre. See Price-List.

FALL - - - BEST TIME FOR STARTING A NEW LAWN

ROHRER'S "FANCY" LAWN GRASS SEED

A permanent mixture containing a careful blend of high quality grasses, including approximately 42% Kentucky Blue Grass, 34% Creeping Red Fescue, 10% Bent Grass, 5% Red-Top. Does not contain Rye Grass or any other coarse grasses. This mixture produces a velvety carpet-like lawn of fine blended grasses of rich green color. One pound covers 250 square feet.

Lb. box \$1.10; 5-lb. box \$4.95 25-lb. bag \$22.50; 50-lb. bag \$42.50 prepaid.

ROHRER'S "GOOD TURF" LAWN GRASS SEED

A good general-purpose lawn mixture at a reasonable price. Contains a blend of permanent and quick-growing grasses that produce a good sod of rich green color. Ideal where the lawn becomes tramped considerably, especially where children play.

Lb. box .85c; 5-lb. box \$3.95; 25-lb. bag \$17.50; 50-lb. bag \$34.50, prepaid.

Pennsylvania residents please include the 4% Sales Tax on all items on this page.

ROHRER'S "SHADY" LAWN GRASS SEED

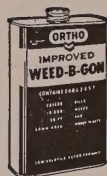

A blend of hardy grasses which grow freely in shaded areas. May be sown under trees. This mixture produces a rich-green, velvety-like lawn. One pound covers 250 square feet. Lb. 95c; 5 lbs. \$4.50; 25 lbs. \$21.25, prepaid.

ATHLETIC LAWN GRASS SEED

A fast-growing, deep-rooted lawn grass mixture, producing a heavy turf with good, green color. Ideal for terraces, playgrounds, athletic fields, parking areas, etc. Will take hard usage. One pound covers 250 square feet. Lb. 49c; 5 lbs. \$2.25; 25 lbs. \$9.75; 50 lbs. \$18.50, prepaid.

MERION VARIETY KENTUCKY BLUE GRASS. Lb. \$2.25; 5 lb. \$9.75; 10 lbs. \$18.50; 25 lbs. \$43.75, prepaid.

SPRAY LAWN WEEDS AWAY WITH IMPROVED WEED-B-GON

The hormone weed killer, containing 2,4-D and 2,4,5-T low volatile esters for use against poison ivy, poison oak, wild blackberry, vines, bindweed or wild morning glory, dandelion, plantain. Use on grass lawns for broad-leaved weed control.

Economical—1 pint covers 4,800 sq. ft. of lawn area.
